

Daniel Scheidemantel Camargo

Applied AI Engineer | Python, Node, React · LLM/Agentic Systems · Full-Stack

Avenue de la Grenade 21, 1207 Genève, Switzerland

Phone: +41 (77) 968 05 61

Email: daniel.supervisao@gmail.com LinkedIn: linkedin.com/in/daniel13

Date of birth: 13/01/1986 | Nationality: Brazilian | Married to EU citizen

Authorization: Eligible for Swiss Permit B (EU/EFTA) via family reunification – Geneva resident; open to relocation to Lausanne

SUMMARY

Applied AI Engineer and Senior Full-Stack developer with 8+ years building and operating scalable systems across cloud environments (AWS, GCP), with direct production experience deploying LLM-powered agentic platforms end-to-end — from architecture through customer delivery.

Designed and operate **Capellaris AI**, a live multi-tenant SaaS platform running multi-agent workflows for enterprise customers, built full-stack (Python/FastAPI, Node.js, React, PostgreSQL + pgvector, GCP/Cloudflare). At Mercado Livre, integrating Claude and OpenAI APIs into large-scale logistics decision-support systems across a multi-cloud infrastructure serving millions of daily transactions.

Deep hands-on expertise in LLM integration (Anthropic, OpenAI, Gemini), agentic orchestration (CrewAI, MCP), hybrid RAG pipelines (embeddings, pgvector, reranking, tool-calling), and full MLOps lifecycle. Experienced across the full customer lifecycle — technical scoping, solution design, integration support and post-implementation iteration. Strong communicator with technical and non-technical audiences. Geneva resident; open to relocation to Lausanne. 13 peer-reviewed publications in distributed systems and cloud computing.

CORE SKILLS

AI / LLM Engineering: LLM integration (Anthropic Claude, OpenAI, Gemini, Mistral); agentic orchestration (CrewAI, MCP); embeddings, pgvector, hybrid search, reranking, tool-calling, prompt versioning, evaluation, MLOps

Back-end & APIs: Python (FastAPI, Flask, Django), Go, Node.js; REST & gRPC API design; microservices; async workers; API versioning and documentation

Front-end: React, React Native, Next.js (awareness); TypeScript; REST API design; UX-oriented API contracts

Databases & Storage: PostgreSQL (+ pgvector), MySQL, MSSQL, BigQuery, Cloud Spanner, Redis, DynamoDB; query optimisation, schema design, ETL pipelines

Cloud & Infrastructure: GCP (CloudRun, App Engine, Firebase, BigQuery); AWS (EC2, Lambda, RDS, Step Functions, ECS); Docker; Kubernetes (Rancher); Terraform (IaC awareness); Cloudflare; Linux

CI/CD & Observability: GitHub Actions, GitLab CI/CD, Jenkins; Cloud Logging, CloudWatch; structured logging, metrics, alerting; Looker Studio; performance optimisation and post-mortem culture

Data & Analytics: Python (Pandas, Polars), BigQuery; data pipeline design; transactional and analytical workloads

Customer-Facing: Technical pre-sales scoping; solution design; stakeholder communication (technical and non-technical); enterprise pilot management; post-implementation support

Languages:

- English – professional fluency
- French – basic, actively progressing (Geneva resident)
- Portuguese – native

PROFESSIONAL EXPERIENCE

Founder & Lead Applied AI Engineer

Capellaris AI (SaaS, agentic AI platform for SMBs – self-funded)

03/2025 – Present

- Designed, built and operate a **production-grade, LLM-agnostic multi-tenant SaaS platform** end-to-end — covering marketing, finance and legal automation use cases for enterprise customers.
- Full-stack delivery: Python/FastAPI backend, Node.js middleware layer, **React front-end**, PostgreSQL + pgvector, Redis, Supabase, Cloudflare WAF; GCP infrastructure (CloudRun, Firebase); OAuth 2.0, IAM, secrets management and tenant isolation.
- Built a reusable **agent-orchestration layer** (CrewAI + MCP) with embeddings, hybrid search (pgvector + BM25), chunking, reranking and tool-calling; integrated Anthropic Claude, OpenAI and Gemini APIs behind a unified multi-LLM abstraction.
- Implemented full MLOps lifecycle: prompt versioning, model evaluation, observability (Cloud Logging) and continuous delivery (GitLab CI/CD).

- **Pilot enterprise customer live in production**; direct technical account management — requirement scoping, integration support and product iteration based on customer feedback, mirroring a Forward Deployed Engineer model.

Senior Software Engineer – Platform & Data APIs

Mercado Livre (e-commerce & logistics, ~120k employees, LATAM)

08/2025 – Present

- Design, build and operate internal platform APIs for large-scale logistics operations serving millions of daily transactions; cross-functional Scrum team of 7, on-call rotation, incident management and post-mortems.
- Develop Python (FastAPI) and Go services; contribute to **React-based internal tooling**; own full production lifecycle on containerised multi-cloud infrastructure (Docker, AWS/GCP via MELI's internal Fury platform).
- Integrate **Claude and OpenAI APIs into production workflows** as autonomous decision-support agents for logistics capacity planning; mentor team members on AI integration patterns and backend best practices.
- Build and maintain CI/CD pipelines (GitHub Actions) with automated testing, observability (structured logging, metrics, alerting) and progressive rollout strategies.
- Design ETL pipelines (Python/Pandas/Polars on BigQuery) feeding **demand forecasting and capacity planning simulators** used by commercial and operations teams for high-volume, data-driven decision-support.
- Stack: Python, Go, FastAPI, React, BigQuery, CloudRun, Cloud Spanner, Redis, Step Functions, MySQL, PostgreSQL, Docker.

Senior Full Stack / Platform Engineer

Buscaônibus / DeÔnibus / Travelier (travel meta-search and BI platform, 4th-largest in Brazil)

04/2021 – 08/2025

- Primary owner of a high-traffic **travel search and ticketing platform** processing millions of passenger queries: design, development, maintenance and on-call support.
- Operated and monetised **passenger demand and pricing data pipelines** — aggregating real-time availability, route coverage and fare data across hundreds of bus operators to power commercial analytics and revenue optimisation.
- Led full platform modernisation: Python 2.7/App Engine to Python 3.12/FastAPI/CloudRun (Docker), cutting average API latency by 25% and GCP infrastructure cost by 40%; directly improved search response quality and conversion.
- Designed and shipped a **route intelligence and demand analytics layer** (BigQuery + Looker Studio) used by business stakeholders to evaluate route performance, passenger volume trends and pricing opportunities.
- Built **Gemini-based AI agents** for internal operations and demand-signal processing via reusable backend APIs.
- Mentored junior engineers on Python best practices, API design and cloud-native deployment.

Software Engineer – Integrations & CI/CD

Portobello Group (ceramics manufacturing & retail, ~4,000 employees)

12/2019 – 04/2021

- Built Python/Django backend integrations between Salesforce, on-prem ERPs and downstream microservices; designed data pipelines for the commercial analytics stack.
- Operated Kubernetes CI/CD pipelines (Rancher + Jenkins) with Docker; maintained MSSQL Server (job scheduling, data pipeline architecture).
- Led technical design and stakeholder support for company-wide **Salesforce rollout**; developed a full financial simulator embedded in Salesforce with a Python backend.

Software Developer – Automation & Cloud

Stormtech (consumer loans, regulated)

08/2018 – 11/2019

- Developed Python automations and data pipeline integrations with a PHP monolith in a regulated financial environment.
- Built and operated an AWS-native platform (EC2, Lambda, Step Functions, DynamoDB, RDS-MySQL, Route53); tracked and resolved production incidents in a fast-paced support context.

EDUCATION

Master of Science in Applied Computing

08/2016 – 07/2018

Santa Catarina State University (UDESC), Brazil – Distributed Systems, Cloud Computing, data-centre efficiency (6 peer-reviewed articles)

Bachelor in Computer Science

02/2011 – 07/2016

Santa Catarina State University (UDESC), Brazil – IoT, automation, energy efficiency (7 peer-reviewed articles)
